Join our Functional Hand Subteam – EnHands e.V.

EnHands e.V. is a non-profit student organization at the Technical University of Munich working to develop accessible upper-limb prostheses for low and middle-income countries. We're looking for students from different areas of expertise to join our Functional Hand Subteam.

1. Qualifications

We don't have any strict requirements for new members: beginners are welcome! Here are some skills you could bring:

- Experience with CAD Design (currently, we work with **Fusion360**)
- Familiarity with rapid prototyping techniques (e.g. **3D printing**)
- Practical experience with mechanical tools (e.g., planning, drilling, cutting)

Our main requirement is **responsibility**: we're building devices real patients will use and need reliable team members with a strong sense of commitment.

If you don't have technical expertise in any of these areas but are passionate about learning and contributing to the team, feel free to reach out!

2. Scope of activities

- Rough division: 50% CAD design, 30% tinkering, 20% tasks related to mechanics and materials science
- 3h to 4h of weekly commitment

You can learn our more about our current prototype in our blog: <https://enhands.de/blog>.

3. What we offer

- Meaningful contribution to a social cause through technical work in an NGO
- Strong addition to CV through hands-on experience
- Flexible working hours (e.g., during exam phase)
- We work on a volunteer basis and thus cannot offer any financial compensation

4. How to apply

If you're interested in joining us, reach out to us at **info@enhands.de**! Please include your name, course and semester (in case you're a student), and your interests. Including your CV is a plus. We're looking forward to having you in our team!
